

CS1106

• Databases - A shared, structured collection of logically related data, stored electronically in a computer system.

• DBMS - Database Management System

- Creates, updates and manages a database
- Bridge between DB and user

* Data and DBMS, along with related applications are referred to as a "Database System", or "Database" *

Applications often use a 3-tier architecture to organise applications into 3 logical and physical computing tiers.

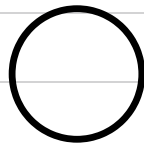

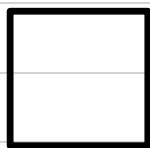

Presentation

Application

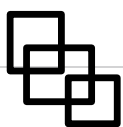

Data

- Each tier can run on its own infrastructure and developed by its own team

Application

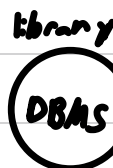

DBMS

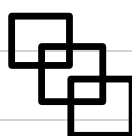

Database file

Traditional DB system

library

Database file

Embedded DB

Separate DBMS
not needed for
application
(runs as library in app)
